SENIOR SYSTEMS, ERP, INFRASTRUCTURE, AND AUTOMATION ENGINEER

Senior systems and infrastructure engineer with 10+ years of experience supporting ERP platforms, SQL-backed business systems, Windows and Linux servers, RDS/terminal-server environments, Azure, networking, firewalls, security tooling, and multi-customer infrastructure. Strong record of turning repeated support work into RMM automation, scripts, dashboards, runbooks, and self-hosted production tools. Bridges infrastructure operations and software delivery with PowerShell, Bash, Python, SQL, Docker, PostgreSQL, Redis, Cloudflare, Traefik, Next.js, TypeScript, and practical AI-assisted workflows.

CORE SKILL AREAS

- ERP and application platforms: ERP systems, RDS/terminal-server application delivery, ERP database/runtime migration planning, ODBC connectivity, SQL-backed business systems, application service restarts, dependency troubleshooting, user workflow support, and operational playbooks.
- Infrastructure and systems: Windows Server, Red Hat Enterprise Linux, Ubuntu/Debian, Active Directory, Exchange, Microsoft 365, Entra ID, Azure, VMware vSphere, Hyper-V, Citrix, SAN/storage, scheduled tasks, event logs, systemd, backups, and restore checks.
- Network, firewall, and remote access: FortiGate, TierPoint managed firewalls, VDOM-aware troubleshooting, SonicWall, Meraki, UniFi, IPsec VPN, SSL VPN, MPLS, VLANs, DNS, DHCP, routing, certificates, DKIM, and post-cutover validation.
- Automation and RMM: Datto RMM, Action1, Autotask, PowerShell, Bash, endpoint audits, API-driven quickjobs, component deployment, fleet SSH rollout, local admin controls, EDR/AV rollout, patch and vulnerability workflows, and diagnostic collection.
- Security and compliance operations: CrowdStrike, ESET, Defender, Keeper, Admin By Request, MFA, phishing response, endpoint posture review, audit logging, access controls, and compliance-oriented evidence workflows.
- Platform and software delivery: Docker, Docker Compose, Traefik, Cloudflare Tunnel, Cloudflare DNS, nginx, PostgreSQL, Redis, BullMQ, Prisma, Auth.js/NextAuth, REST APIs, webhooks, Stripe, Resend/Brevo, Excel/OpenPyXL automation, Power BI, React, and Next.js.

INFRASTRUCTURE IMPACT

- Supported ERP and infrastructure operations across 800+ customer environments spanning application support, server administration, remote access, network connectivity, security tooling, and operational documentation.
- Built and deployed RMM automation for endpoint rename, local admin handling, endpoint protection install/removal, domain removal, local-admin demotion, privileged access tooling, SSL monitoring, Linux firewall remediation, endpoint security audits, and application deployment.
- Standardized secure administrative access across all datacenter Linux and Windows hosts with verified key-based access, documented connection paths, and exception handling.
- Coordinated and troubleshot customer VPN, network, and firewall cutovers across managed firewall environments, site-to-site tunnels, remote-access VPN, routing, printer connectivity, and vendor change tickets.
- Stabilized an RDS-hosted ERP application delivery fleet by replacing disruptive daily reboots with planned maintenance windows, adding service warmup automation, and standardizing signed remote-desktop launch paths for end users.
- Built and operated self-hosted production applications behind secure tunnel and reverse-proxy ingress with containerized services, relational databases, cache/queue services, background workers, backups, restore checks, and public smoke tests.

EXPERIENCE

ASA Automotive Systems - Manchester, NH / Remote

Lead Infrastructure Engineer | January 2026 - Present

System Engineer | January 2025 - January 2026

Application Support Engineer | June 2024 - December 2024

- Own design, implementation, administration, and support for enterprise infrastructure across hybrid on-premises and Azure environments in a distributed, remote-first organization.
- Serve as senior escalation point for complex issues spanning Windows/Linux servers, virtualization, RDS, ERP platforms, SQL-backed systems, networking, VPN, security tooling, and automation platforms.
- Provide Tier 3 ERP/application support by correlating application behavior with logs, SQL/database state, server health, service dependencies, RDS behavior, and network path behavior.
- Documented and improved ERP operations including RDS fleet behavior, RDP shortcuts, ODBC connectivity, application service restarts, database/runtime migration planning, server references, and support playbooks.
- Built repeatable Datto RMM components and API-driven quickjob workflows for endpoint administration, security tooling, app deployment, Linux service remediation, and fleet access rollout.
- Rolled out key-based SSH coverage across Linux and Windows server fleets, documented ProxyJump and VPN-path requirements, and created triage references for unreachable or stuck hosts.
- Supported major network conversion and VPN cutover work involving TierPoint, FortiGate, SonicWall, Meraki, SSL VPN, IPsec tunnels, routing validation, printer remediation, and post-cutover checks.

Boise's Best Shades - Meridian, ID

Owner | February 2023 - December 2024

- Founded and operated a residential window-covering business covering sales, measurement, product sourcing, installation, scheduling, troubleshooting, vendor coordination, and customer support.

Container and Packaging - Eagle, ID

Business Intelligence Developer | August 2022 - April 2023

Systems Engineer | June 2021 - August 2022

- Designed SQL-based reporting and analytics solutions with Microsoft Power BI for accounting, supply chain, and sales teams.
- Built secure data pipelines connecting on-premises and cloud data sources while administering Microsoft 365, Azure, Teams phone/trunking, call center systems, UniFi networking, servers, backups, and provider coordination.

Allied Business Solutions - Boise, ID

Systems Engineer | September 2020 - June 2021

- Delivered infrastructure projects across customer environments, including Exchange to Microsoft 365 migrations, Azure server deployments, and on-premises server upgrades.
- Served as escalation support for NOC teams while improving escalation patterns, documentation, and operational reporting.

Commercial Tire - Meridian, ID

IT Manager | August 2015 - August 2020

Systems Administrator | August 2014 - August 2015

Junior Web Developer | May 2013 - August 2014

- Led enterprise IT operations supporting 500+ users across corporate offices and retail locations, overseeing infrastructure, systems, vendors, budgets, and internal IT staff.
- Directed companywide technology initiatives including ERP implementations, database migrations, enterprise software rollouts, infrastructure upgrades, and network modernization.
- Administered VMware vSphere hosts, SAN storage, network firewalls, Windows Server services, Microsoft Exchange, Active Directory, Citrix environments, and Red Hat Enterprise Linux based ERP systems.
- Designed and developed internal web applications and intranet tools for ordering, information sharing, tire usage tracking, dispatch operations, and internal workflows using PHP, JavaScript, SQL, and related web technologies.

SELECTED SYSTEMS AND AUTOMATION PROJECTS

NorthLineIT Operations Platform

- Built a full-stack MSP operations platform with public site, admin app, customer portal, service desk, billing, agreements, RMM command center, email workflows, and automation.
- Integrated Prisma/PostgreSQL, Stripe, Resend, Action1, Cloudflare services, Docker, Traefik, and Cloudflare Tunnel with guarded RMM workflows and approval context.

AR Reporting Automation Platform

- Built a Next.js and Python Excel automation workflow for weekly AR aging and collections processing, including note preservation, workbook formatting, KPI extraction, and repeatable report output.
- Designed deployment using Docker, PostgreSQL, Redis, Auth.js, Cloudflare Tunnel, and Traefik.

Self-Hosted App Host Architecture

- Operate a Linux Docker app-host pattern behind Cloudflare Tunnel and Traefik for multiple self-hosted applications with PostgreSQL and Redis backing services.
- Documented Docker services, network model, backups, restore checks, firewall posture, health checks, smoke checks, service restart patterns, database dumps, and post-reboot validation.

Local AI Operations and Agentic Delivery System

- Built a local AI operating system for web-app, Linux, infrastructure, and MSP work, with role-based agent teams for scouting, implementation, review, testing, documentation, and deployment planning.
- Operate local model infrastructure and GPU-backed test workflows for model selection, prompt/runtime evaluation, context handling, and agent orchestration across real engineering tasks.
- Standardized the workflow with goal files, approval gates, deterministic checks, reviewer loops, and evidence capture so AI-assisted work remains auditable and operator-controlled.

EDUCATION

College of Western Idaho - Associate of Applied Science, Information Technology / Web Application Development
